

DC ELECTRONICS PRESS RELEASE

NEW ELECTRIC POWER ASSISTED STEERING SYSTEMS

DC Electronics are pleased to announce the release of two new electric power assisted steering systems, **Pro Street** and **Pro Race**, to complement their current steering product range.

Designed for markets such as classic cars, hot rods and low volume sports car builders, **Pro Street System** brings electric power assisted steering to road cars, without the need to change the steering rack or fit a hydraulic system. **Pro Street** is available in two styles; a complete height adjustable, collapsible steering column (Pro Street Column) or a shortened motor/gearbox to go in line with the existing steering column (Pro Street MGU). Because the systems come from an OEM production vehicle and retain the OEM controller and software they are suitable for road use.

Pro Race System is a cost effective EPAS system for motorsport use only. It comes complete with motor/gearbox, ECU and wiring harness. The ECU and software is custom made by DC Electronics. Although the system retains the five user selectable steering maps that can be found in the Company's existing EPAS Ultra system, these are factory fixed and not adjustable and there is no CAN Bus feature on this model.

David Cunliffe, Managing Director of DC Electronics explains "Ever since we have been making electric power steering for professional race teams we have had many requests for an entry level system that, whilst retaining the basic qualities that makes our motorsport system so popular, is more accessible to them from a cost perspective. As a Company we always listen to our customer requirements and both these new systems definitely have been top of the list. I am confident our customers will be happy with what we have produced for them!"

This year DC Electronics will be exhibiting at **Professional Motorsport World** in Cologne, Germany (Stand 1022), **Performance Racing Industry** in Indianapolis, USA (Booth 4128) and **AutoSport** in Birmingham, UK (Stand E181) shows. Both the new **Pro Street** and **Pro Race** EPAS systems will be on show and our engineers will be available to provide expertise, advice and guidance on all of our product range, at any of these events.
