

The company MCF S.r.l. has been researching, developing and producing safety belts for the Original Equipment Market and special vehicles since 1989. Our products are present in all of the most important international markets.

What's more, thanks to our in-house technical and testing laboratories division we can design restraint systems in accordance to our customers' particular needs, as well as undertake the relative type approval tests with the main European approval authorities.

Our production plant extends over two covered areas of over 3,000 square metres of which 1,500 are dedicated to production, whereas the offices and the laboratory occupy 400 square metres.

Over the years the production potential has risen steadily up, to where it is now reaching a current level of over 1,000,000 pieces a year. Thanks to our flexible structure we are the best business partners for satisfying the most diverse small or large business needs. The modern automatic equipment we have for our production enables us to guarantee an extremely competitive pricing structure and to carry out a complete monitoring process on all of the production phases.

MCF S.r.l. maintains and optimises its Quality System, already certified by a qualified Authority, which applies to all the activities at its plant in Pancalieri. The application of this policy includes the updating of the Company's General Quality System in order to integrate and coordinate all activities concerning Quality performed by all Departments at all levels, and which are necessary for achieving the planned objectives.

Thanks to a qualified technical staff and a well equipped testing laboratory MCF can design the best restraint system, taking advantage of the data and the experience matured over more than twenty years of work in this sector.

MCF follows the customer from the study and development of the safety belt, right up to its type approval through the relative approval authorities, according to the ECE and SAE J386 standards for the categories M – N - L QUADRICYCLES - TRICYCLES - SPECIAL VEHICLES, according to the FIA standards for the racing sector and to the NATO standards for the military vehicles.

Our services :

- Support and technical service during the planning stage for the new restraint systems
- Testing of the anchorage points and suggestion of the best technical solution
- Personalization according to the customer requirements
- Very high quality/price ratio
- Trying-out and static tests at our laboratory
- Dynamic tests at the main European approval authorities
- Customized approvals
- Quick reaction times and delivery times
- Safety stock
- After-sales service and technical valuations
- Insurance policy in case of faulty items
- Constant improvement of the items and adaptation according to the regulations in force
- User-friendly website <http://www.mcfsrl.com>
