

At the 2016 Professional Motorsport World Expo bf1systems will be demonstrating the latest IRTPTMS wheel sensor, which is capable of measuring the temperature of the inner tyre carcass at 5 user selectable points, in addition to the existing TPMS and IRTPTMS solutions that are trusted by customers in every major race series around the world. As well as the on-car electronics, off car-solutions such as the networked Garage Monitoring System will be on display to allow visitors to understand how bf1systems products can ensure your tyres are in optimal condition at all times. On the stand will be product experts who can discuss the products and advise on the best solution for your application.

A range of force measurement solutions will be on display, including the recently launched top mount loadcell which is currently being used in WRC and WTCC applications, and as the majority of force measurement solutions are bespoke, one of our senior design engineers will be available to discuss your requirements and how we can assist.

Also on the stand will be a range of bf1systems wiring harnesses showing capabilities derived from supplying motorsport customers around the globe for over 22 years, and integrated composite parts including the 488 GTE/GT3 steering wheel and switch panel, the Aston Martin Vulcan steering wheel and a current F1 wheel. Visitors to the stand will be able to get up close and personal with the components and see them in operation.
