Product/technology summary

Siemens is happy to invite you to discover the latest technologies at ATE this year again. Automation, digitalization, electrification and a broad range of Simcenter Testing Solutions – pass by our booth and you will not be disappointed. Our experts are ready to walk you through our innovations and show you how you can benefit from the quality of our products and our extended experience.

During the Open Technology Forum, Jeroen Lanslots will give a presentation on a brand new acoustic product – LMS Sound Camera from the Simcenter portfolio. Don't miss this one out: block the date – Thursday, 22nd June at 13h.

On the booth:

Our stunning kit car instrumented with all the available solutions for NVH, Acoustics, Durability, Powertrain, Sound Quality and more!

Test Equipment for Development and Research with high performance three-phase current dynamometer and an innovative new automation system CATS_{flexible}.

E-Mobility applications and future trends

High speed synchronous machines type 1SS2 with low moment of inertia for very dynamic test bed use

Liquid cooled converter SINAMICS S120 CM with SINAMICS DCP module and transparent design

End of line test benches and vehicle diagnostics

We aim to drive testing one step further, so come and join the Siemens experience!
